

QCPDataSelection::intersection

QCPDataSelection::operator-=

QCPDataSelection::operator<<

QCPDataSelection::dataRange
Count

```
graph LR; A[QCPDataSelection::intersection] --> D[QCPDataSelection::dataRange Count]; B[QCPDataSelection::operator-=] --> D; C[QCPDataSelection::operator<<] --> D;
```

The diagram illustrates the relationship between three methods of the QCPDataSelection class and a specific attribute. On the left, three white rectangular boxes with black borders contain the method names: QCPDataSelection::intersection, QCPDataSelection::operator-=, and QCPDataSelection::operator<<. On the right, a gray rectangular box with a black border contains the attribute name QCPDataSelection::dataRange Count. Three blue arrows originate from the right side of each method box and point towards the left side of the attribute box, indicating that these methods interact with or modify the dataRange Count attribute.
