

QCPPolarGraph::rescaleAxes

```
graph LR; A[QCPPolarGraph::rescaleAxes] --> B[QCPPolarGraph::rescaleValueAxis]; B --> C[QCPPolarGraph::getValueRange];
```

A flowchart illustrating a sequence of three methods from the QCPPolarGraph class. The first method, 'rescaleAxes', is shown in a white box. A blue arrow points from it to the second method, 'rescaleValueAxis', which is also in a white box. Another blue arrow points from the second method to the third method, 'getValueRange', which is shown in a gray box. This visualizes a call sequence where 'rescaleAxes' calls 'rescaleValueAxis', which in turn calls 'getValueRange'.

QCPPolarGraph::rescaleValueAxis

QCPPolarGraph::getValueRange
